

# 1 · Entry point

Settings > Account. Delete account sits next to Export my data; no request to us is needed to reach it.

## 2 · Confirmation step

The dialog names every store it clears on the server and on the device, states that TikTok videos are untouched, and that it cannot be undone.

### 3 · Post-deletion completion state

Deletion clears the session, so the app returns to the signed-out gate with an empty local store. Captured on a clean install, which produces the identical state.
